PORTFOLIO

2026

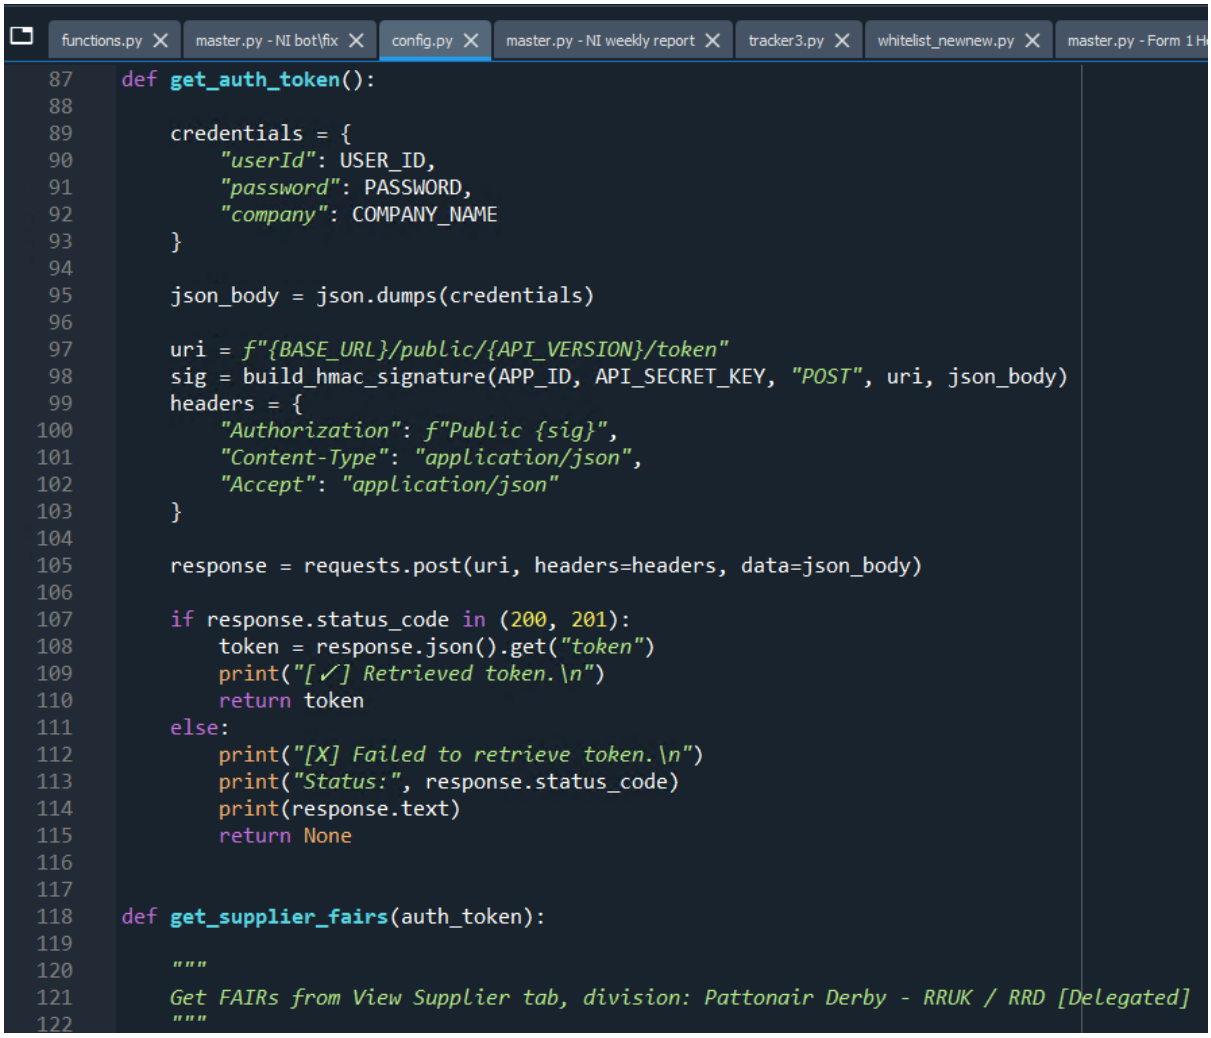

OASIS watchlist update (web scraping)

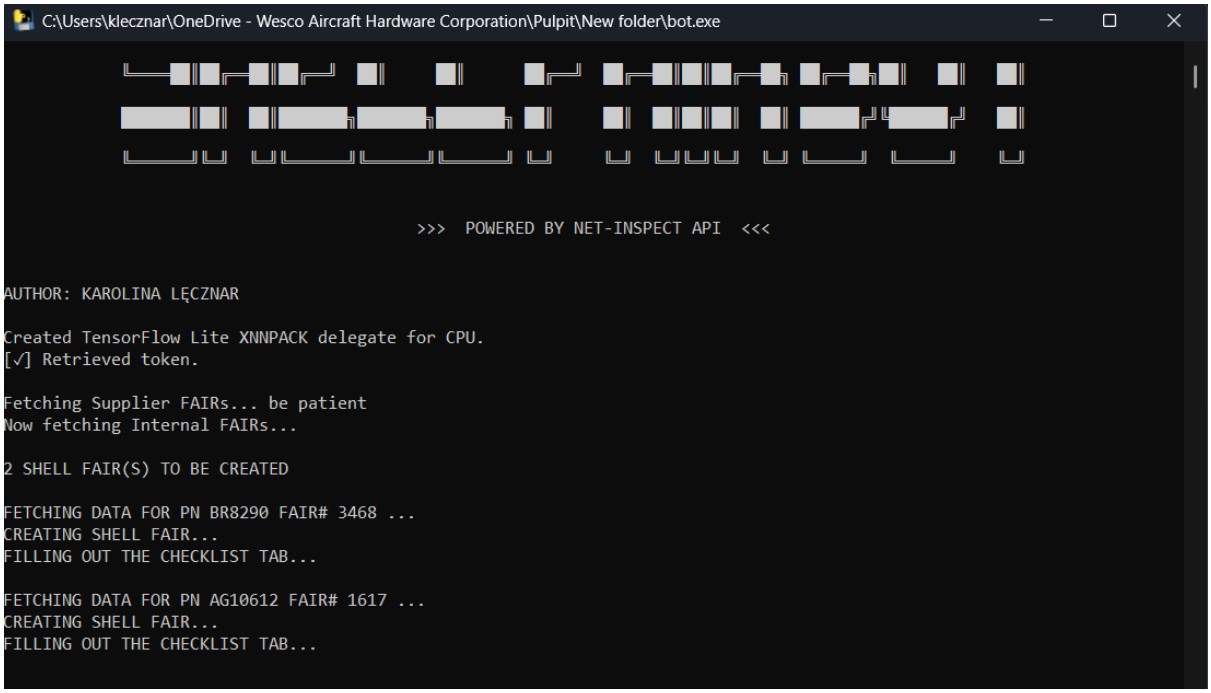

Added approximately 30,000 suppliers to Incora's watchlist on the OASIS platform using Selenium-based web scraping after OASIS declined to provide API documentation. The automation ran in the background and completed the full update within 7 days.

SHELL FAIR API bot – completed
Connect to the Net-Inspect API server and create Shell FAIRs for Delegated suppliers for customer Rolls-Royce automatically
GET: find FAIRs that don't have a Shell FAIR yet and extract data

POST: create a Shell FAIR (Incora Form 1) + fill out required data

PUT: amend data if needed

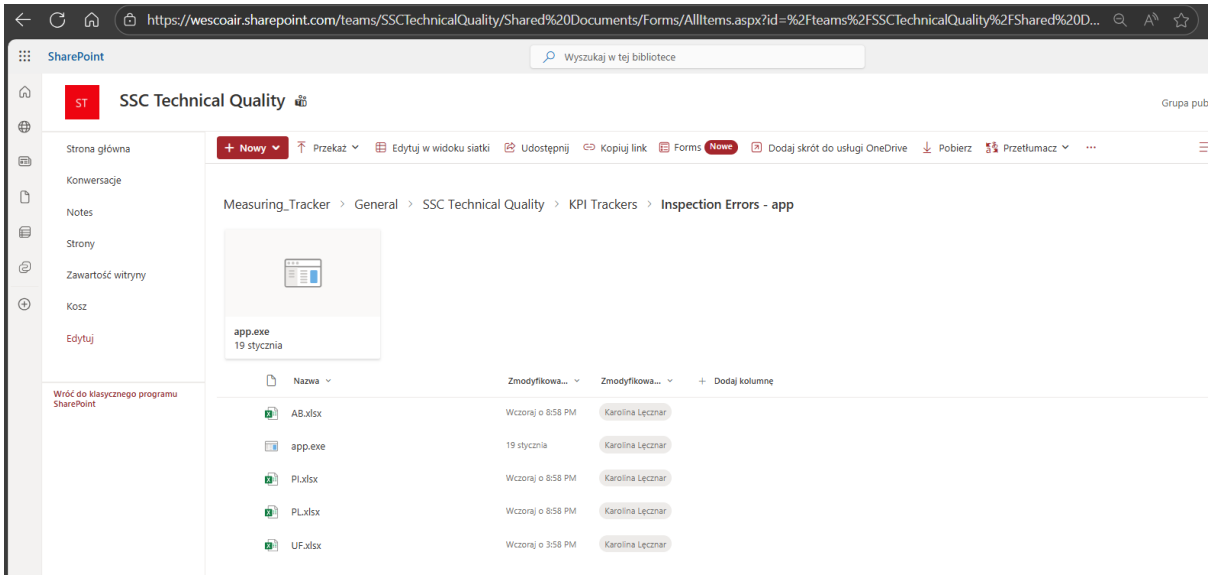

Automated bot for Shell FAIR creation powered with Net Inspect API, originally implemented using web scraping techniques, now refactored to leverage NI API for improved reliability and performance.

The project initially relied on HTML parsing and browser automation to extract data and perform actions. This approach was later replaced with direct API integration, significantly enhancing speed, stability, and maintainability while reducing susceptibility to UI changes and anti-scraping mechanisms.

Key features include real-time data retrieval, automated Shell FAIR creation based on configurable criteria, and efficient request handling with rate limiting and error management. The bot supports scalable architecture, allowing easy extension for additional endpoints or automation workflows.

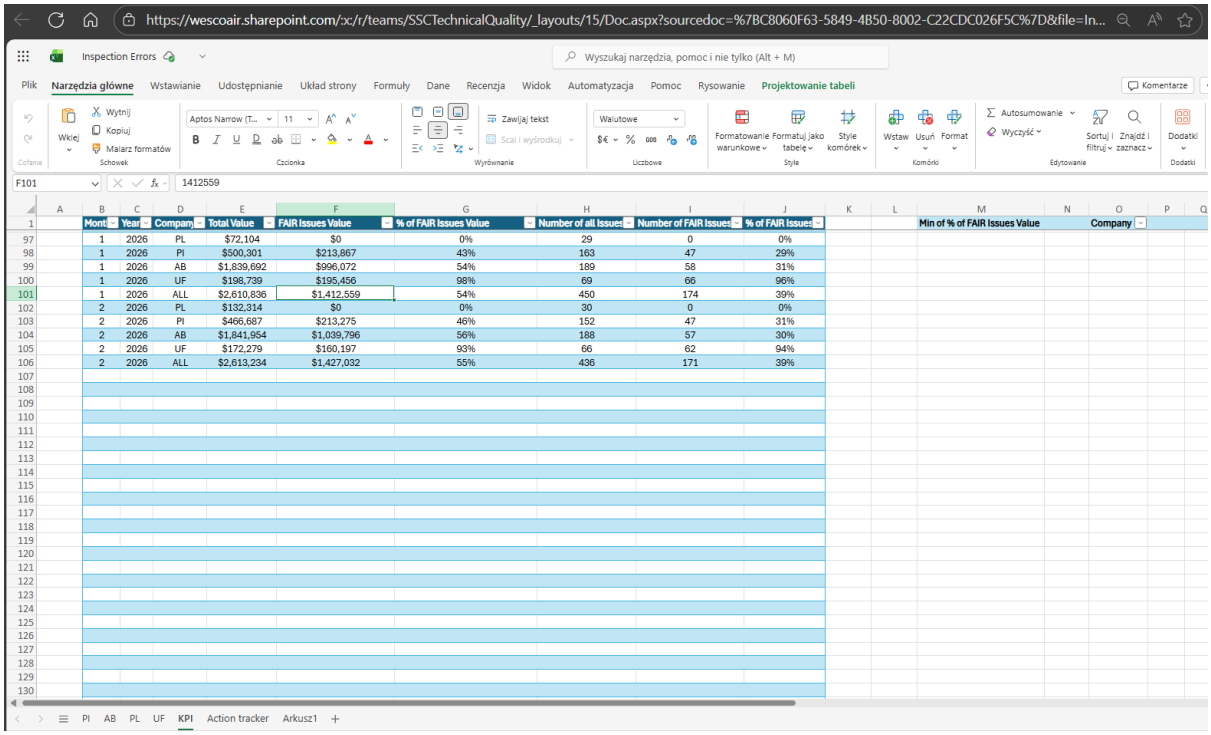

INSPECTION ERRORS KPIs

Developed an app, which moves xlsx files from Outlook via Power Automate flow to Sharepoint folder, analyses them in python, calculates KPIs and pastes data to Tracker in Sharepoint for the Quality department in SSC, Poland.

```
175             for c, value in enumerate(row, start=2):
176                 ws.cell(row=i, column=c, value=value)
177
178     # ============================================================
179     # MAIN PIPELINE
180     # ============================================================
181
182     def main():
183
184         INSPECTION_FILE = get_resource_path("Inspection Errors.xlsx")
185         wb = openpyxl.load_workbook(INSPECTION_FILE)
186         results = {}
187
188         for name in KPI_ORDER:
189             cfg = INSPECTIONS[name]
190
191             data, total_value = read_source_file(cfg["file"], cfg["sheet"])
192
193             row_count, fair_count, fair_value = process_target_sheet(
194                 wb, name, data
195             )
196
197             results[name] = {
198                 "row_count": row_count,
199                 "total_value": total_value,

PURCHASE ORDER

GOODRICH ACTUATION SYSTEMS LIMITED
Purchase Order : 11827326

Created: 25.05.2022

Collins Aerospace

To the extent Supplier is subject to NIST SP 800-171 security requirements in accordance with DFARS 252.204-7012, Supplier represents that it has (1) completed within the last 3 years and will maintain at least a current basic NIST SP 800-171 DoD Assessment for all covered contractor information systems related to its business with Collins Aerospace that are not part of an information technology service or system operated on behalf of the Government and (2) submitted or will submit to the Government for posting to the USG's Supplier Performance Risk System (SPRS), the information required by paragraph (d) of DFARS 252.204-7020 prior to accepting this Order from Collins Aerospace.
A CERTIFICATE OF CONFORMITY IS REQUIRED WITH THE GOODS. Work to be undertaken in accordance with the requirements of ASQR-01 & 981-151-001.
Special process operations to be controlled per 981-151-005.
Methods of electrical (ECM/EDM) machining must be controlled in accordance with procedure 917-020-005, 917-020-006 and 917-020-007.

print("Number of pages to loop through: ", last_page)
print("")
# go back to the first page
```

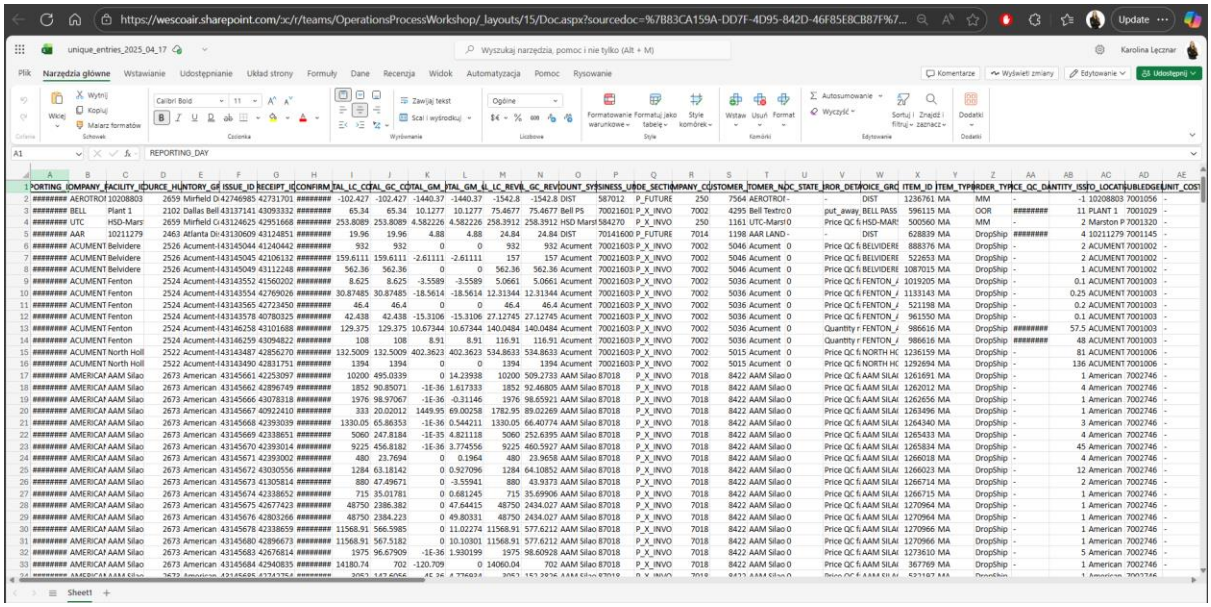

XLSX COMPARE TOOL

Built a python script which compares two newest xlsx files (incoraChem_Daily_Unbilled_Sales_Margin) and finds unique values for Lorenzo. (BIND-PROJ-051)

SHELL FAIR BOT (web scraping)

Developed the Net-Inspect bot for Shell FAIR creation for Rolls Royce Team. Benefits: ~1300 shell fairs x ~7min x ~$25/h annually ->> 152h, $3.8k annually (BIND-PROJ-056)

recording.mp4

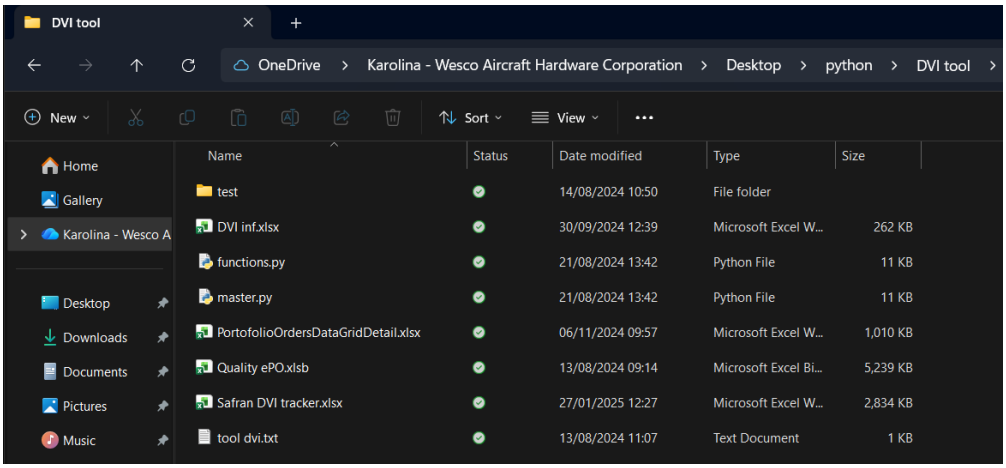

Shipping Data Automation and ASN Creation project (BIND-PROJ-055) - on hold until RTX shares the API documentation.

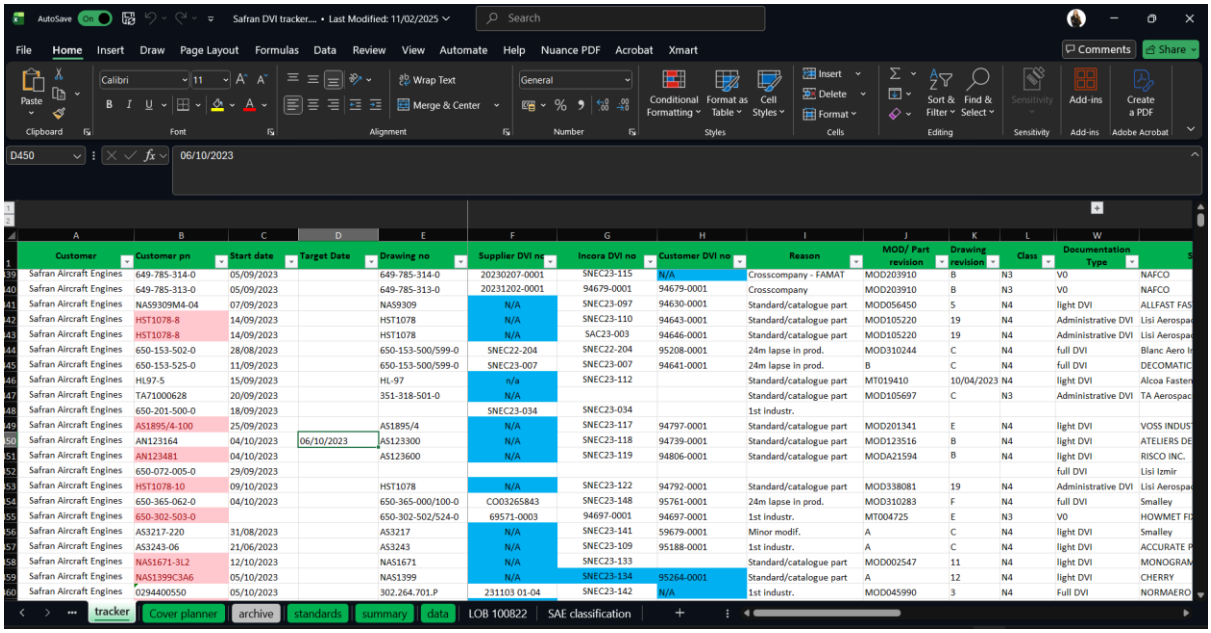

AI Udemy course completed with cert

2024

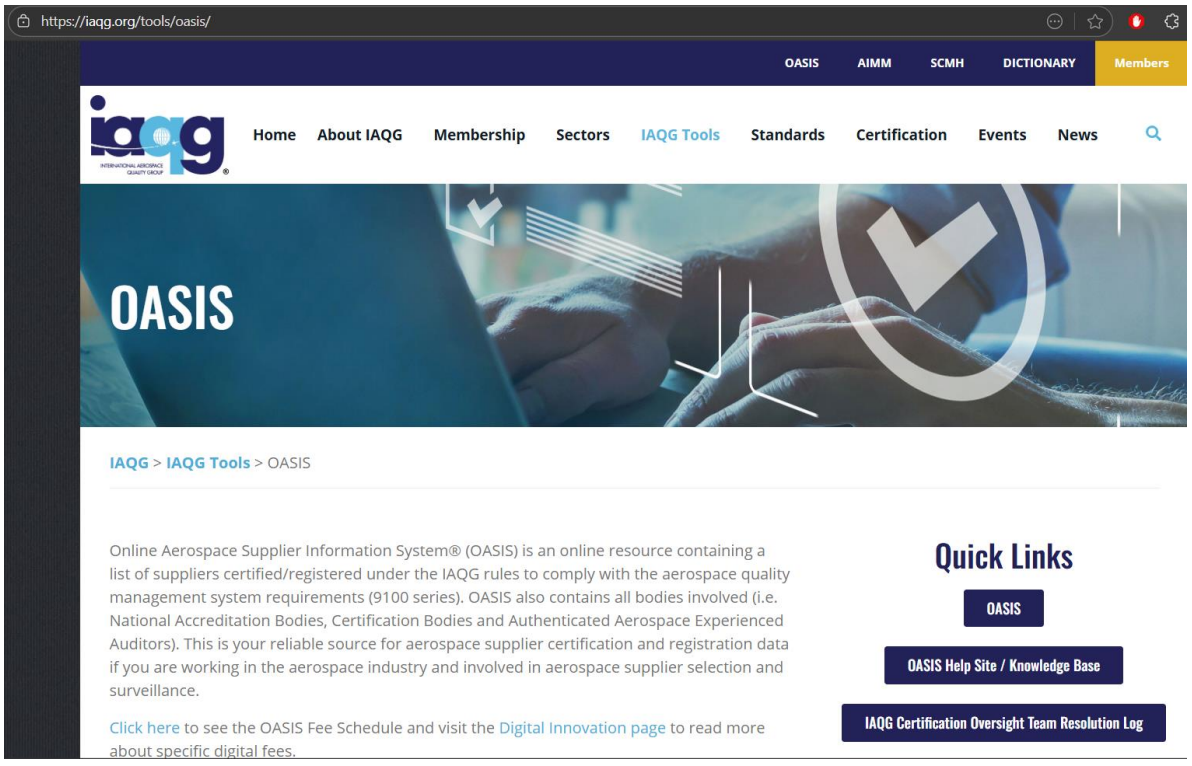

DVI TOOL PROJECT

developed an app, which compares 4 different Excel files, updates Safran DVI Tracker with the most current target dates, adds missing data (P/Ns, customers, target dates, manufacturers) to ensure Quality department prioritizes correct items in lieu with customer demand, also finds nonconformities in Incora's ERP system. First Run: pasted 121 new items in Tracker, analyzed ~20,326 rows (~320,000 cells) in Excel in ~10 min

WATCHLIST PROJECT (web scraping)
developed an app, which verifies suppliers' AS/ISO certificates on OASIS website, downloads certificates into designated directory, creates reports, done once a month, previously handled manually by the Quality department - time/cost saving up to ~540h annually

```python
# -*- coding: utf-8 -*-
"""
Created on Thu Jan 18 20:13:14 2024
